# Best in class

 **moveIT VARIO**

## ANYMA moveIT VARIO

Interactive whiteboards and projectors are already well-established in modern education.

The key to successful integration in the daily routines is a height adjustment system that lives up to its promises. ANYMA moveIT Vario offers a tailor-made solution for every room with just a few components that can be easily combined - no matter which brands and models you have purchased or you are going to implement.

ANYMA moveIT Vario is designed and manufactured in Germany.

### Description

Maintenance-free  
TÜV- and GS proved system.

Color:	anthracite
Support System for Board and projector:	universal
Max. height	1,0 m
Min. height to fall below	2,0 m

## ANYMA moveIT VARIO

During the evolution of our patented ANYMA moveIT, we have focussed on safety and durability issues. Furthermore, our aim has been to reduce the running costs for the user. Starting with the first installation, it has been very important for us to ensure an easy setup process with minimum effort.

The high industrial standard of the counterweight-based system fulfills the highest expectations for smoothness and precision in height adjustment at the same time reducing maintenance work like recalibration and premature wear in ordinary solutions based on spring mechanismus.

Our independence also prevents you from unexpected costs alongside future changes. Whether you replace equipment (i.e. board or projector) or entirely switch to another manufacturer, our ANYMA moveIT VARIO is compatible and can easily be altered to fit the new specifications.
