easy Wall mounting

lockable

slide or pivotable door  
also as flap

all standart PC sizes  
individual construction

## ANYMA safeIT PC-Box

Due to the ever increasing usage of multi-media teaching aids in the class room, new questions relating the protection of these valuable devices have come up:

**“How to protect the PC against external damage?”**  
**”Where to put the device (mouse / keyboard) in the breaks?”**  
**”How to protect the equipment against theft?”**

The Anyma safeIT series offers the best price-performance ratio in the market: Robust, lockable fixture which is simply mounted to the wall next to the board or the interactive whiteboard. 2 mm of steel sheet optimally protect the computer against external damage. For example, it can be avoided that pupils fooling about in the five-minute break cause accidents.

At the same time, the Anyma safeIT PC-Box safely stores mouse and keyboard. This is a smart solution against unwanted loading of software or data.
